Cloud IT

Flexible, lightweight, and
always connected.

Our diverse and secure cloud infrastructure is perfectly suited to deliver applications, email and much more to any device, anywhere in the world.

We can provide you with your very own private Cloud, a space in our tenanted environment or simply supply you with rack space to host your own servers.

- **Access from anywhere enabling total flexibility**
- **Our cloud environment handles the heavy lifting**
- **Massive cost savings on hardware and software**
- **Access apps, email, backup and more**

Online backup

If something went wrong with your computer hardware, would you lose your valuable data? Backing up your files to the cloud offers a safety net should the worst happen, allowing you to get back on your feet as quickly as possible. Silver Lining's backup service is secure, resilient, and can be automated to protect your data in real time.

Hosted desktop

With a hosted desktop solution from Silver Lining, your desktop and all your applications are hosted in the cloud, allowing you to access them from any computer in any location. Save on hefty equipment costs, and ensure complete business continuity with remote working options.

Hosted exchange

Microsoft's Outlook software integrates seamlessly with the cloud, allowing users to access and sync their emails, contacts and calendars from anywhere, on any device. Encryption and anti-virus protection ensures your connection to and from the cloud is always secure.

Pricing options and dedicated support

We can deliver cloud services on a pay-as-you-go, pay monthly, or fixed-price basis. All our cloud offerings reside with dedicated hosting specialists and are backed up by our expert in-house technical support team, with 4-hour SLAs to expedite the recovery of critical data.
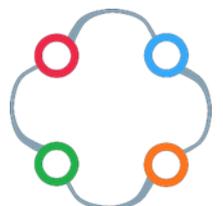

Flexible, scalable, and disaster-proof

The beauty of the cloud is that the workload of delivering data and applications to users is relegated to our resilient data centre, meaning you'll save on expensive equipment and maintenance costs. This method of delivery also makes the platform inherently scalable; adding new users is a hassle-free process when their data is served directly from the cloud.

Taking your office out of the equation enables remote working, which in turn offers your business rock-solid business continuity. In the event your office becomes inaccessible, employees can simply access the cloud and continue working remotely, with no loss of sensitive data.

How it works

Your data, accessed from anywhere in the world by any device instantly without costly Infrastructure.
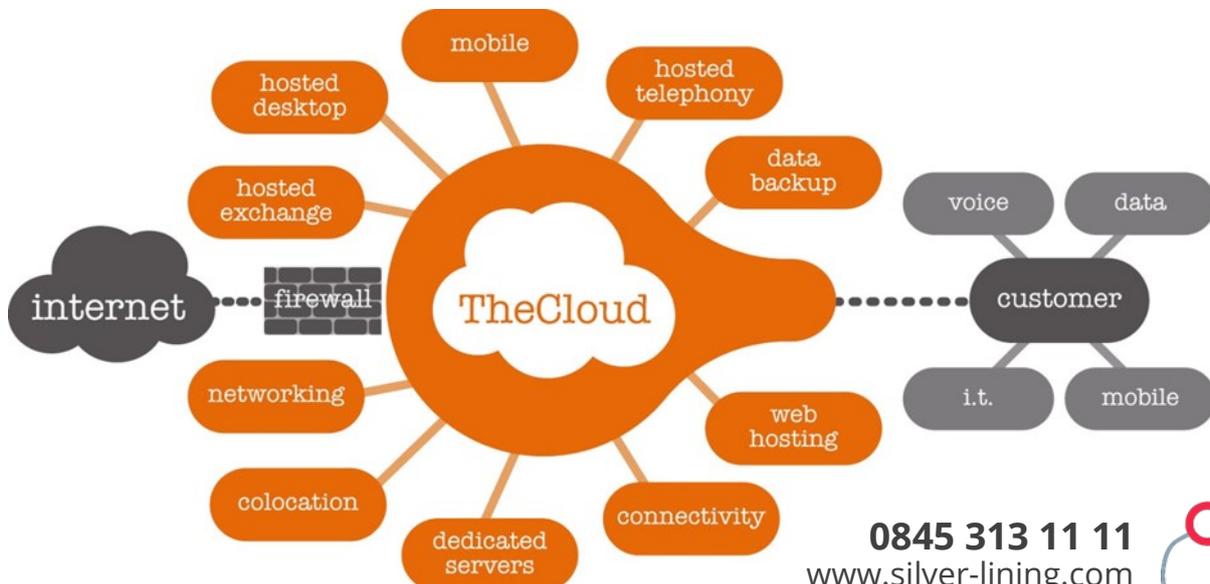

You simply need a device to access our secure data centre, and a data connection. With these two things you can access a network environment where you will see applications as if they are loaded onto your own machines. For example, why have a server which houses Office, Accounts, CRM and other Applications that have to be installed locally, supported, licenced and upgraded when you can access it on a pay-as-you-go model
via our Silver Lining infrastructure?

More than just an IT provider

Silver Lining doesn't just help you supply IT services. Together with our **voice**, **connectivity** and **networking** options, we help fulfil your **unified communications** needs whilst creating **partnerships** with you.

Silver Lining empowers you to become a **highly agile business** by accessing the **latest technology** without the burden of infrastructure and software costs. As a valued Silver Lining customer you also have primary access to all of our available managed products and services.
