

etherreach

highspeed radio network

The speed and reliability of fibre-optic leased lines, delivered **wirelessly**.

EtherReach offers the **speed and reliability** of fibre optic connections at **lower cost** and installed in as little as five days.

Delivered via our secure, **high performance radio network**, EtherReach is available where traditional "last mile" connectivity is unavailable or prohibitively expensive. EtherReach does not suffer from cable breaks and other physical faults associated with last mile connectivity.

Unlike shared services where bandwidth varies, especially at peak times, EtherReach is a **dedicated service** that guarantees bandwidth availability at all times. EtherReach offers synchronous speeds from **10Mb** to **1Gb**.

Our EtherReach Leased Line can also be installed to ensure reliable **backup connectivity** for business continuity. Keep your business online in the event of a primary data connection failure.
