Hosted Desktop
the ultimate in application delivery

TheCloud Hosted Desktop is the ultimate vehicle to deliver published business applications such as Microsoft Office from our central core to any device.

Our secure platform delivers always-on applications and provides users with the flexibility to work where, when and how they want.

- **Are you looking for a more flexible IT strategy?**
- **Are you caught in a capital outlay cycle?**
- **Is your business at risk from IT failure?**
- **Simplified IT Admin via a Virtual IT team**

Software and applications

Silver Lining Published Desktop allows us to publish the latest software and applications directly to your desktop removing the headaches of software management, major purchases, and any need for specialised hardware and support. Whether it is a standard Microsoft® suit or a bespoke application that you require, each Desktop is tailored to the individual user via an on-demand (pay as you go) licensing model.

Infrastructure and maintenance

Silver Lining's extensive infrastructure using the latest technology allows our system to be updated and expanded without you needing you to change anything. Pro-active management BY Silver Lining removes the burden and cost for you.

Secure centralised data store

Silver Lining infrastructure ensures users have access to a centralised network drive and storage array with the added comfort of being able to apply security policies on a per user basis. Having a single data store protects data being stored locally and helps manage version controls.

Business continuity and mobility

Using a Hosted Desktop allows your business to insure against local disasters, such as office fires, transport strikes or severe weather conditions that would prevent staff working from the office. Because users can access their Hosted Desktop from anywhere, working from home or from a temporary location in times of disaster guarantees business continuity.

Hosted backup and recovery

Silver Lining provides a highly secure and automated method of safeguarding business data by storing and archiving customer data as required. This not only allows you to meet any legal requirements but provides you peace of mind that your data is safe, secure and protected. Data is securely backed up and can be replicated to multiple devices and locations to ensure additional security and availability if required.

How it works

You simply need a device to access our secure Data Centre and a data Connection. With these two things you can access a network environment where you will see applications as if they are loaded onto your own machines. For example, why have a server which houses Office, Accounts, CRM and other Applications that have to be installed locally, supported, licenced and upgraded when you can access it on a pay as you go model via our Silver Lining Infrastructure.
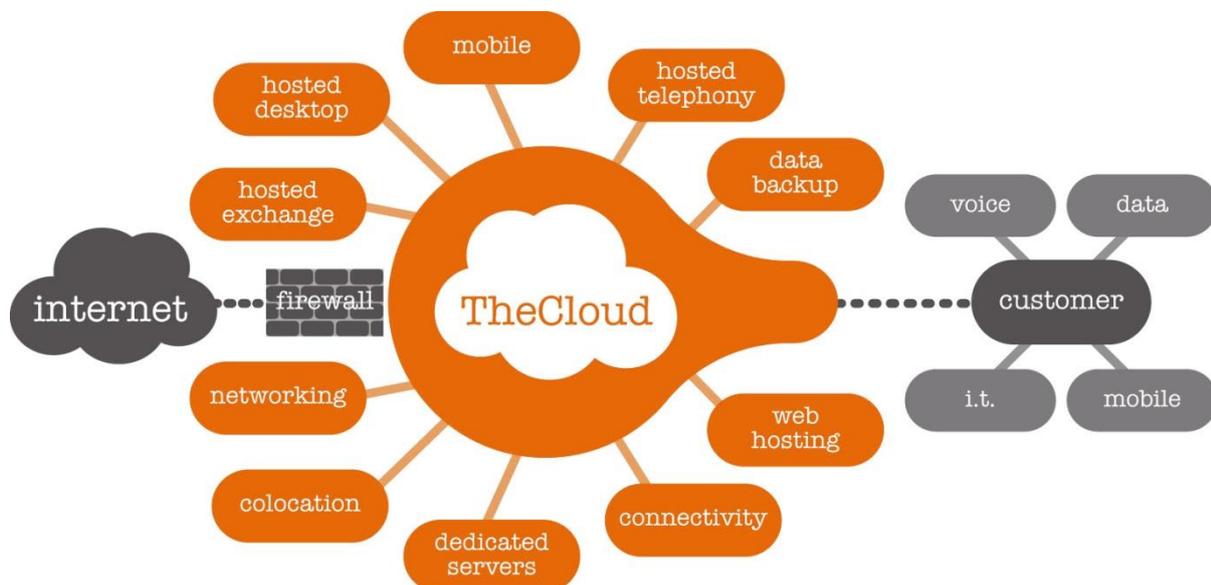

Your data, accessed from anywhere in the world by any device instantly without the need of costly Infrastructure.

More than just an IT provider

Silver Lining don't just help you adopt IT services. Together with our voice, connectivity and networking options, we help you benefit from unified communications.

We empower you to become a highly agile business by accessing the latest technology without the burden of infrastructure and software costs.
