Online Backup

Flexible, dynamic backup and recovery.

Silver Lining offers a number of backup solutions, talk to us today.

Online backup allows recovery of critical data which has been dynamically backed up to a diverse resilient infrastructure offering you tools to access a single file or complete data store as and when you need it.

- **Are you looking for a more reliable backup offer?**
- **Are you looking for a more dynamic solution?**
- **Do you find tape backups fail?**
- **Would like a simple pay as you grow model?**

Secure data protection

Silver Lining's on-line backup encrypts the data to be backed up within your office before transfer. The encryption key is never backed up and backups can be done through a secure SSL channel.

Tape vs. online

Silver Lining recognises the limitation of tape backups including failure to back up, it being a manual process, storage capacity, shorter backup windows as data store grows, tape management and data recovery.

Offsite backup

Silver Lining offers you the ability to back up to a secure 3rd party location within the South of England. The data is 1st backed up locally in your office and then through incremental updates over a data connection, 3G or above is backed up to our secure environment.

Hosted backup and recovery

Silver Lining provides a highly secure and automated method of safeguarding your data by storing and archiving as required. This not only allows you to meet any legal requirements but provides you peace of mind that your data is safe, secure and protected in such a way that it can be recovered to multiple devices and locations as needed.

Bare metal backup and restore

Silver Lining is able to perform bare metal backup and restores both on-site and off-site. A crashed system with 10GB in size can be recovered within a few minutes from the local backup.

If the local backup has been destroyed in the 'disaster' your backup system can be restored easily from backup servers.

Support heterogeneous environments

At Silver Lining we support all common platforms, including Windows, Linux, Mac, NetWare, Unix and others that support Java in whatever environment clients have.

Continuous data protection

Silver Lining captures every version of a file that has been saved to your network or device, With CDP, whenever there is a change at block and file level made to the file it automatically backs up the changes to the local and backup servers.
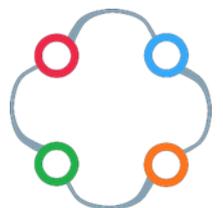

Web-based restore

Silver Lining allows users to restore backed up data via the internet through a secure web browser. This provides additional restore options of both files and folders whilst travelling or on a situation that sees you outside your normal environment.

How it works

Your data, accessed from **anywhere in the world** by **any device** instantly without costly Infrastructure.
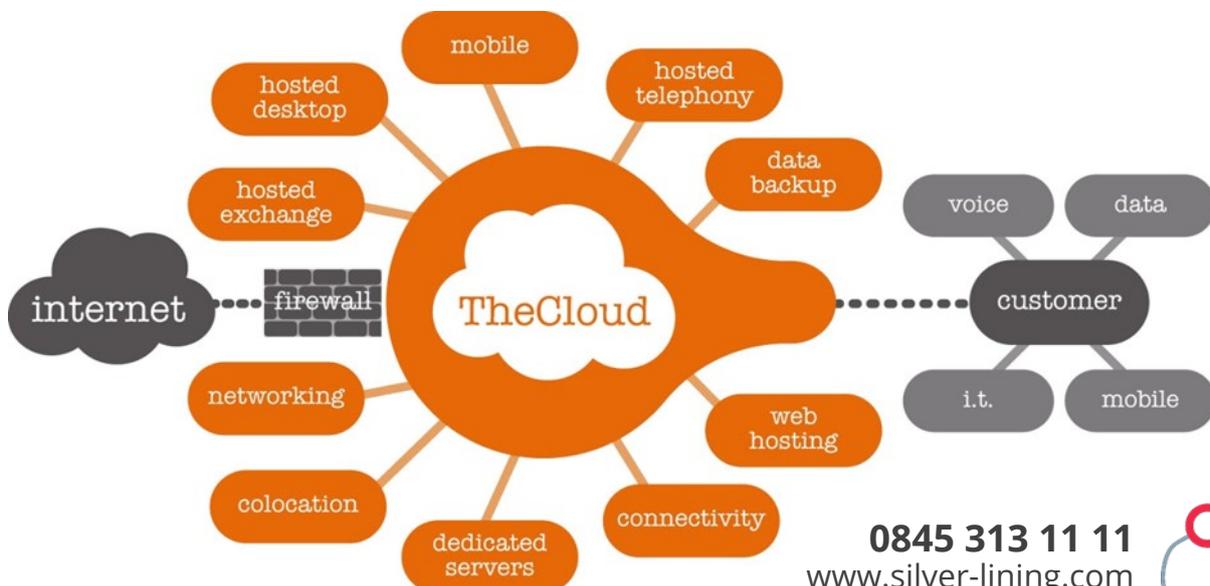

We take an initial data store onto a secure device and transfer this to our secure location for upload. Also, data is backed up to a local server file store which synchronises your data within our datacentre. Once synchronised, incremental data is transferred securely between our locations and yours.

More than just an IT provider

Silver Lining doesn't just help you supply IT services. Together with our **voice**, **connectivity** and **networking** options, we help fulfil your **unified communications** needs whilst creating **partnerships** with you.

Silver Lining empowers you to become a **highly agile business** by accessing the **latest technology** without the burden of infrastructure and software costs. As a valued Silver Lining customer you also have primary access to all of our available managed products and services.
