PCI Compliance Solutions

Lift your business out of scope with a **cloud** or **on-site** PCI solution.

When it comes to customers, security is your top priority. We offer a fully managed, proven and award-winning PCI-DSS compliance solution.

With tightening Payment Card Industry (PCI) regulations and an ever-present threat of fraud from outside and within organisations, a **robust and affordable** solution is key.

Key Questions

Do you take **card payments**, and are therefore in scope of PCI?

Struggling to **secure your internal network** for PCI-DSS compliance?

Having to implement **draconian staff measures** to prevent card detail capture?

Not sure how to get card details securely to your **payment provider**?

What is PCI-DSS?

The Payment Card Industry Data Security Standards is a set of requirements any business taking card payments must meet.

Meeting the PCI requirements can help you on the journey to fulfil the EU General Data Protection Regulation that becomes law in May 2018.

How does it affect you?

If your company takes payments by card and you're not PCI compliant, you're at risk of heavy fines - or worse.

For most companies, it is the potential damage to their brand and reputation, and the risk of losing business and customers that is driving them to adopt compliance recommendations.

How is it enforced?

Non-compliance can be a costly oversight, as estimated fines of £4 per transaction can be levied and merchants could withdraw their services.

Your transaction volume will determine the criteria to meet. Costly audits by Qualified Security Assessors may be required.

More than just compliance

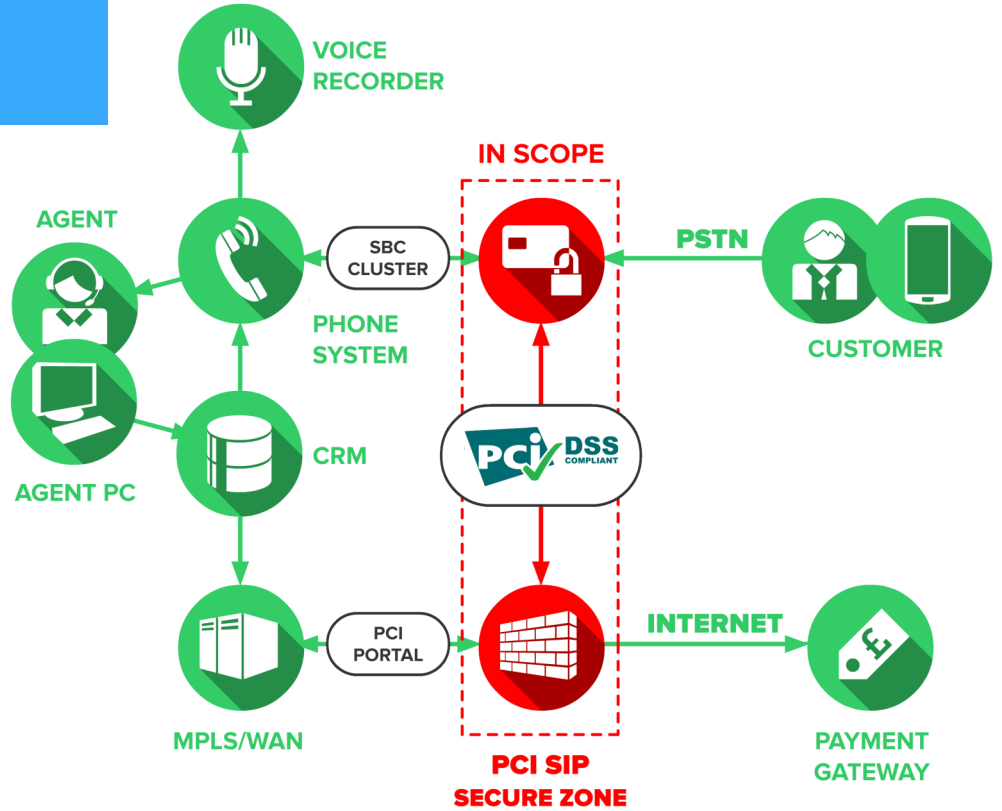

Finding a partner that understands your entire voice and IT landscape bolsters your ability to plan strategically.

Migrating from ISDN to SIP or reducing your footprint help manage costs against business plans. As a converged communications provider,

How it Works

- 1) Customer connects to agent and agrees to make a payment, agent opens **web portal**
- 2) Customer enters their card details via **telephone keypad**
- 3) The solution **captures the digits** entered by the customer
- 4) **No authentication data** is captured by call recording or presented to agent

Cloud PCI

Enjoy cost and efficiency savings by eliminating the need to invest in a physical appliance.

With SIP trunking via our cloud platform, we can host PCI compliance hardware within our secure data centres. With the impending end of ISDN by 2025, PCI SIP is a natural fit for businesses that are already using SIP or looking to migrate from a legacy ISDN estate.

OR

On-Premise PCI

Our traditional method of delivering award-winning PCI compliance; our appliance installed within your existing contact centre infrastructure.

This option is ideal for businesses that aren't yet ready to migrate over to SIP, as the appliance integrates with existing lines and systems. A managed service wrap-around can be put in place to ensure compliance.
